

# A launch film for every capability, in every format, ready when the engineers ship.

Six AI agents went live for a client in one month, and each needed a launch film in three formats. I built a studio where a film is a React component, the brand is one file, and Claude Code turns a one-page brief into rendered videos.

# Production software in weeks, with senior engineers and frontier models.

An AI-native software delivery firm: legacy modernisation, AI agent workflows, Salesforce implementations, and AI transformation engagements, on an in-house platform called Exo. Pods of two to five senior engineers, agents doing most of the building, outcomes tied to metrics agreed before work starts. Clients include Z47, AVPN, TASC, Houzbay, BoardRoom, and Hypernative.

## The founders built and sold one engineering firm, then ran product and technology at Gojek.

Sidu Ponnappa

CEO, Co-founder

Co-founded C42 Engineering, acquired by Gojek in 2015. Then CIO of Gojek Singapore, MD of Gojek India, and a Gojek Group board member.

Aakash Dharmadhikari

CPTO, Co-founder

Co-founded C42. Group Chief Product Officer and board member at Gojek. Later CPO at Jiva.

Steve Sule

CFO, Co-founder

Former Partner at Edith Grove Capital, previously Arma Partners and M&A at Mahindra & Mahindra. Joined as an advisor, became a co-founder.

# A one-page brief is the whole input. The agent does the rest.

```
content/nus-daily-digest/brief.md
Product    Daily Digest. A scheduled, cited news digest of
           portfolio companies, posted to Slack.

Goal       One glanceable, sourced roundup each morning.

Audience  The investment team.

Formats    landscape, vertical, square.   Duration ~7s.

Tone       Calm, confident, editorial. A radar, not a
           decision engine.

Music      Understated corporate, gentle build.
```

This is the real brief for one of the seven films, lightly trimmed. Everything the studio needs fits on one card, and it reads like a note to a colleague, not a spec.

The brief, the script it produced, and the props file sit in the repo next to each other. Change one line months later and the film re-renders. You cannot do that with a timeline in a video editor.

# One component renders every format. Nobody re-composes a shot by hand.

Landscape · presentations, web

16 : 9

Square · feed posts

1 : 1

Vertical

9 : 16

The same beat from the company briefs film, rendered three times from one React component. The template reads its own width and height and rearranges itself. Add a new social size to the format list once and every film in the library gets it.

# Seven films in four weeks, for six agents and one capability update.

01 Investment Agent  
The main agent, narrated in first person

02 Company Briefs  
Source-cited one-pagers, generated on demand

03 Daily Digest  
A cited morning roundup, posted to Slack

04 Q&A Bot  
Grounded answers about a portfolio, with citations

05 Contract Generation  
Real generated output as the hero shot

06 Contract Drafter  
Launch cut for the drafting bot, recut after review

07 · Agent Update, the capability-update cut for the main agent, in the client's brand

# The rules the agent follows were each learned from a film that went wrong.

■ wide capture, letterboxed

■ re-composed for the tall frame

A desktop capture cannot fill a vertical frame and stay readable.

So the rule is: capture in portrait first, re-compose as a card second, and only as a last resort pan across the full frame under a big headline.

## 01 Say what it does for the client, not how it works

No pipeline talk on screen. Six to eight words per headline, because video text is read in seconds.

## 02 Put the product output near full-bleed

Dense documents get a slow pan so the detail scrolls past.

## 03 One thing on screen at a time

Scenes dip to paper between beats. No crossfades showing two headlines at once.

## 04 Let motion settle rather than push

Fast pushes look like an advert. A slow settle does not.

## 05 Use real output, but keep it internal

A real contract is more convincing than a blank one. Real client data stays inside, and every such film gets a shareable version.

# Any capability realfast ships can now have a launch film the same week, in every format, in the client's brand.

---

## Same week

A brief written on Monday is a rendered film by Wednesday. The studio kept up with six agent launches in one month.

---

## Every format

Landscape, square, and vertical come from one component. A new format is one line in a list, and every film gains it.

---

## Any brand

Change one theme file and the whole library re-renders in a client's colours and type. The seventh film already shipped that way.

Seven films, twenty-one renders, one brand file, four weeks.
